Navigating the Way
Creating Integrated Systems of Support for Pregnant and Postpartum Families

Partnerships

“...Partnerships with community leaders, the media, volunteers, civic associations, neighborhood health centers, women’s centers. Partnerships are the backbone of nearly every successful community program. Partnerships include a variety of arrangements and levels of engagement to produce results that one organization, community group or coalition alone could not achieve. Partners may serve as channels, or go-betweens, to help spread information.”

Integrated Systems

Families

Healthcare Providers

Childbirth Professionals

Public Health Departments & Government

Social Support Organizations

Early Childhood & Infant Mental Health

Wendy N. Davis, PhD
www.postpartum.net
How do we create Integrated Models of Care?

- Medical and professional school education
- Provider education
- Outreach and community networking
- Routine screening and assessment throughout system
- Community resources & connections
- Strengthen bridges between professional, social support, public health and educational systems
Partner Roles and Opportunities

- Raise awareness and decrease stigma
- Advocate for improved services and systems
- Be the voice of families and front-line service providers in policy discussions
- Engage medical, community, and social service providers in identifying and implementing change
- Deliver family-centered, culturally competent clinical and support services
- Provide training and consultation
System & Public Health Opportunities

- Identify the scope and impact of the problem
- Compile policy and best practice research
- Integrate MMH into public health, primary care, mental health, addictions, early childhood, and social services at the state and local levels
- Convene and support the growing partnership
- Seek funding opportunities
- Identify and pursue opportunities to address MMH across state agencies and programs

Oregon Health Authority
Maternal Mental Health
Work Group Report
Sept. 2010
History of Terminology

Puerperal Psychosis

Postpartum Depression

Perinatal Depression

Perinatal Mood & Anxiety Disorders

Maternal Mental Health
Prevalence

- Difficulty assessing prevalence
  - 😊 The smiling depression 😒
- Differences in research
  - Populations
  - Location
  - Methods
Prevalence

- Prenatal Depression: 13.5%
- Postpartum Depression (PPD)
  - 13.6% in first month
  - 19.2% in first year
- PPD, Teen Moms: 26% - 60%
- PPD, Moms of Multiples 25%
- PP Psychosis: 0.1 - 0.2%
- Fathers: 10%

Best Practices

- Develop community network of care and support
- Assess and predict risk
- Accurately confirm depressive or anxious symptoms in pregnant and postpartum women
- Implement effective prevention efforts based on evidence-based risk factors
- Implement effective treatment interventions

Registered Nurses’ Association of Ontario, Sept2012
Toolkit: Implementation of Best Practice Guidelines
Before we implement best practices, we have to decrease stigma and empower families.
The Challenge

- How do we reassure when they are afraid to disclose that they need help?
- How can we help when they don’t know what’s wrong?
- Our challenge is to reduce shame and normalize new parent’s need for support
- Treatment will not lead to full recovery if shame is not addressed
Obstacles to Care

- Shame and Fear
- Provider
- Misinformation
- Cultural Taboos
- Provider Accessibility

How can we support and empower families?

- Prenatal education
- Normalizing postpartum adjustment
- Education for mom and family
- Inform about risk factors
- Ask and listen without judgment
- Reassurance and encouragement
- Referrals, resources, and follow-up
Primary Prevention

“...Prevention is the great challenge of postnatal illness because this is one of the few areas of psychiatry in which primary prevention is feasible...”

Hamilton & Harberger (1992)
Primary Prevention Model

- Risk factors are known
- Population is known and present
- Feasible to identify high-risk mothers
- Screening is inexpensive
- Screening is educational
- Many risk factors are amenable to change
- Known, reliable, and effective treatments
Prevention: What Can We Prevent?

- Lack of information
- Escalation of distress
- Crisis
- Discontinuity of care
- Relapse
- Recurrence of acute episode in next pregnancy
Suicide is one of the three leading causes of maternal death

PSI Motto

- **You are not alone**
  - Other moms and dads experience this
  - Connection and support will help you

- **You are not to blame**
  - This is not something you caused
  - This is not a reflection of your ability as a parent

- **With help, you will be well**
  - All symptoms are treatable
  - It is a sign of strength to reach out
  - It will get easier
What does a baby know?
Normalizing Emotional Vulnerability

“Becoming a parent can be a tough transition. We talk to all our families about emotions and mental health. How do you feel emotionally?”

“Lots of women feel like being a new mom is harder than they expected. How has it been for you?”

“You are not to blame for your depression; this is part of becoming a mother for many women.”
Risk Factors
Predictive Risk Factors

- **Previous PMDs**
  - Family history
  - Personal history
  - Symptoms during pregnancy

- **History of Mood Disorders**
  - Personal or family history of depression, anxiety, bipolar disorder, eating disorders, or OCD

- **Significant Reactions to hormonal changes**
  - Puberty, PMS, hormonal birth control, pregnancy loss

Predictive Risk Factors, continued

- **Social Factors**
  - Inadequate social support
  - Interpersonal violence
  - Financial stress/poverty

- **High Stress Environments**
  - Military families
  - Teen parents
  - Moms of multiples

- **Abuse**: Current or Past

- **Endocrine Dysfunction**
  - Hx of Thyroid imbalance
  - Other endocrine disorders
  - Decreased fertility

Contributing Factors for PMDs

- **Childbearing & Infant Complications**
  - Pregnancy
  - Birth
  - Breastfeeding

- **Age-related stressors**
  - Adolescence
  - Perimenopause

- **Climate Stressors**
  - Seasonal Depression or Mania

- **Perfectionism** and high expectations
Risk Factor Check List

Check the statements that are true for you:

- It’s hard for me to ask for help.
- I’ve had trouble with hormones and moods, especially before my period.
- I was depressed or anxious after my last baby or during my pregnancy.
- I’ve been depressed or anxious in the past.
- My mother, sister, or aunt was depressed after her baby was born.
- Sometimes it’s hard to slow down: I don’t need to sleep, have lots of new ideas, and feel very restless.
- My family is far away.
- I don’t have friends I can count on nearby.
- I don’t have the money, food or housing I need.

If you checked three or more boxes, you are more likely to have depression or anxiety during pregnancy or postpartum.

Reach out for help to reduce your risk.

© 2010  Wendy N. Davis. PhD
Don’t Forget the Partners

- Dads and other partners also experience stress, anxiety, and depression.
Perinatal Mood Disorders

Many shades of blue
Can begin any time during or after pregnancy, including loss
Might merge with baby blues or start later
Onset any time in the first year postpartum
Common triggers for later onset

- **Hormonal Triggers**
  - Rapid weaning
  - Hormonal birth control
- **Increased family stress**
  - Return to work
  - Illness or hospitalization
  - Loss and grief
Types of PMDs

- Prenatal depression or anxiety
- Complicated baby blues
- Major postpartum depression
- Postpartum anxiety or panic disorder
- Postpartum obsessive-compulsive disorder
- Bipolar mood disorders
- Postpartum psychosis
Other Perinatal Disorders

- Grief Reactions
- Post Traumatic Stress Reaction
- Acute Stress Reaction
- Postpartum Exhaustion
- Endocrine Disorders
Etiology of PMADs

- **Physical**
  - Genetic predisposition
  - Sensitivity to hormonal change

- **Psychosocial Factors**
  - Inadequate support
  - Perfectionism, Superwoman

- **Concurrent Stressors**
  - Sleep disruption
  - Poor nutrition
  - Health challenges
  - Interpersonal stress
  - Cultural stress and barriers
Ruling Out Other Causes

- Thyroid or pituitary imbalance
- Anemia
- Trauma
- Side effects of medicines
- Alcohol or drug use
Cultural Diversity

[Diagram showing various cultural diversity factors such as age, physical abilities, sexual orientation, race, ethnicity, gender, parental status, geographic location, communication style, economic status, family/worklife, marital status, functional specialty, military experience, job level, thinking styles, union/non-union, religious beliefs, native born/non-native, smoking status]
Maternal depression has varying meanings across communities

- Affects how we perceive, explain, and report symptoms
- Culturally diverse opinions about cause of sadness
- Traditional healing practices often part of picture
- Religious communities and practices can support or increase shame and guilt

Perinatal Mood & Anxiety Disorders
Not just Depression

- Unexpected symptoms
  - Obsessive Thoughts and Fears
  - Agitation and Anxiety
  - Anger, Rage
  - Insomnia
  - Mania
  - Protectiveness and Hypervigilance
  - Drug and Alcohol Dependence
Mental Health in Pregnancy

- Rates in pregnancy are just as high as postpartum
- Distress in pregnancy often discounted by providers as normal pregnancy complaints
- Prenatal anxiety tends to be intense and persistent
- Pregnancy and infant loss also cause distress and increase risk for mental health challenges

Depression: Prenatal & Postpartum

- Sadness, Crying Jags
- Feeling Overwhelmed
- Irritability, Agitation, Anger
- Sleep Disturbance
- Appetite Changes
- Mood Swings
- Apathy
- Exhaustion
Anxiety: Prenatal & Postpartum

- Normal new parent worry vs. anxiety disorder

- Possible Symptoms
  - Panic attacks
  - Insomnia
  - Low appetite
  - Fears: losing control, illness, danger, fainting
  - Physical symptoms: shaky, dizzy or short of breath

Symptoms of a PMD

“I finally told my husband that he and my daughter would be better off without me—that I was not a good mother or wife. I felt like things were never going to get better—that I would never feel happy again. The only way out was to die.”

…I am going to act as though everything is fine and I am terrified of what lies ahead.”

Wendy N. Davis, PhD
wdavis@postpartum.net
Traumatic Stress: PTSD or Acute
Trauma

- Cheryl Beck “Trauma is in the eye of the beholder”

- Trauma = perceived threat to the psychological or physical well being and safety of self or loved one

- Shattered expectations

Intrusive, repetitive thoughts—usually of harm coming to baby (ego-dystonic thoughts)

Tremendous guilt and shame

Horrified by these thoughts

Hypervigilance

Moms engage in behaviors to avoid harm or minimize triggers

Educate mom that thought does not equal action

Bipolar Disorders

- 60% of bipolar women present initially as depressed
- If prescribed antidepressant w/out mood stabilizer, at risk of cycling into mania
- 50% of women with bipolar disorder are first diagnosed in postpartum period
- 85% of bipolar women who go off their medications during pregnancy will have a bipolar relapse before the end of their pregnancy

Postpartum Psychosis

- 1–2 per thousand births
- Early Onset – usually first two weeks

- Insomnia
- Confusion/disorientation
- Rapid mood swings
- Waxing and waning (can appear and feel normal for stretches of time in between psychotic symptoms)
- Might be over-excited, hypomanic
- Delusions (e.g. baby is possessed by a demon)
- Hallucinations (e.g. seeing someone else’s face instead of baby’s face)

"It was the seventh deadly sin. My children weren't righteous. They stumbled because I was evil. The way I was raising them they could never be saved. They were doomed to perish in the fires of hell."

Andrea Yates, mother of Noah, John, Luke, Paul & Mary
**OCD vs. Psychosis**

- **Postpartum OCD:**
  - More gradual onset
  - Women recognize thoughts/images are unhealthy
  - Extreme anxiety related to thoughts/images
  - Overly concerned about “becoming crazy”

- **Postpartum Psychosis:**
  - Acute onset – sudden noticeable change from normal functioning
  - Women do not recognize actions/thoughts are unhealthy
  - Might seem to have less anxiety when indulging in thoughts/behaviors
